The Life of Brian is not really interesting but I am paid to do this job. No one would remember Brian's life if not for a mad lecturer who used it as an illustrative example in a tutorial at the University of East Anglia.

1 Introduction

Everyone knows, even the dumbest reader, that Brian was an ordinary bloke.

2 Infancy

As Albert Einstein, Brian was a late developer, except that, contrary to Einstein, Brian never developed very much.

2.1 Before the age of six

Absolutely nothing happened to Brian until the age of six... and not much after.

2.1.1 Do we need to elaborate?

No!

Acknowledgement

The help of the Brian Trust was unvaluable in writing this paper.

As Albert Einstein, Brian was a late developer, except that, contrary to Einstein, Brian *never* developed very much¹.

*Third year CMP student

¹According to his tutor Albert Einstein.

When you write a paragraph with \LaTeX you do not need to take care of it.

When \LaTeX encounters a blank line the current paragraph finishes. Next time it finds some text it starts a new paragraph.

List of things to do:

Learn \LaTeX , practice with \LaTeX , become a \LaTeX pert, write a book on \LaTeX , bore the pants of students with \LaTeX .

I am 100% sure you'll have no problem using \LaTeX ... I am prepared to bet 1£on it (I am not mad!).

"This is an incorrectly formatted quote". "This is a correctly formatted quote"
